Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1-13. (Canceled)

- 14. (Original) An isolated polypeptide comprising vanadium haloperoxidase polypeptide consisting of a catalytic helical frame that complexes a vanadium ion and catalyzes the oxidation of o-dianisidine (ODA).
- 15. (Original) The isolated polypeptide of claim 14, wherein the polypeptide comprises an Ala residue at a position corresponding to position 455 of SEQ ID NO: 2, a Cys residue at a position corresponding to position 457 of SEQ ID NO: 2, and a Val residue at position 525 of SEQ ID NO: 2.
- 16. (Original) The isolated polypeptide of claim 14, having an amino acid sequence having at least 70% amino acid sequence identity to a sequence from residue 435 to residue 632 of SEQ ID NO:2, wherein the polypeptide catalyzes oxidation of o-dianisidine (ODA) when complexed with a vanadium ion.
- 17. (Original) The isolated polypeptide of claim 16, the polypeptide has at least 80% identity to a polypeptide as set forth in SEQ ID NO:2.
- 18. (Original) The isolated polypeptide of claim 16, wherein the amino acid sequence is residue 435 to residue 632 of SEQ ID NO:2..
- 19. (Original) The isolated polypeptide of claim 16, wherein the polypeptide has a molecular weight of about 20 kDa.
- 20. (Original) The isolated polypeptide of claim 16, wherein the polypeptide is immobilized on a solid surface.

- 21. (Original) The isolated polypeptide of claim 16, wherein the polypeptide further comprises a cleavable linker sequence.
- 22. (Original) The isolated polypeptide of claim 21, wherein the cleavable linker sequence is an enterokinase cleavable linker sequence.
- 23. (Original) The isolated polypeptide of claim 16, wherein the polypeptide further comprises an purification tag.
- 24. (Original) The isolated polypeptide of claim 23, wherein the purification tag comprises a plurality of histidine residues.
- 25. (Original) A method for enzymatically halogenating a compound, the method comprising contacting the compound with an isolated polypeptide of claim 14.
 - 26. (Original) The method of claim 25, wherein the compound is a protein.
- 27. (Original) A method for enzymatically oxidizing a compound, the method comprising contacting the compound with an isolated polypeptide of claim 16.
- 28. (Original) A method preparing an active vanadium haloperoxidase polypeptide, the method comprising:

culturing recombinant bacterial cells comprising an expression cassette encoding the vanadium haloperoxidase polypeptide under condition suitable for the expression of the vanadium haloperoxidase polypeptide;

isolating inclusion bodies from the bacterial cells;

solubilizing the vanadium haloperoxidase polypeptide in alkali at pH 10-12; and refolding the vanadium haloperoxidase polypeptide, thereby producing an active vanadium haloperoxidase polypeptide.

29. (Currently amended) The method of claim 28, wherein the expression cassette comprises a heterologous promoter operably linked to the polynucleotide sequence of elaim 1 a polynucleotide sequence encoding a vanadium haloperoxidase polypeptide consisting

of a catalytic helical frame that complexes a vanadium ion and catalyzes the oxidation of odianisidine (ODA).

- 30. (Original) The method of claim 28, wherein the step of refolding comprises contacting the vanadium haloperoxidase polypeptide with an ammonium sulfate solution.
- 31. (Original) The method of claim 30, wherein the step of refolding is carried out at room temperature.
- 32. (Original) The method of claim 30, wherein the ammonium sulfate solution further comprises magnesium sulfate.
- 33. (Original) The method of claim 28, wherein the step of refolding comprises contacting the vanadium haloperoxidase polypeptide with magnesium sulfate.
- 34. (Original) The method of claim 33, wherein the step of refolding is carried out at about 0°C to about 10°C.
- 35. (Original) The method of claim 28, wherein the step of refolding comprises contacting the vanadium haloperoxidase polypeptide with the vanadium haloperoxidase polypeptide with imidazole and sodium or potassium chloride.
- 36. (Original) The method of claim 33, wherein the step of refolding is carried out at about 10°C to about 17°C.
